UNITED IN SPORT

FIELDturf® Playground

Research shows that falls to the surface contribute up to 80% of injuries to children on playgrounds. With something as valuable as children's safety at stake, it makes perfect sense to outfit your playgrounds with the safest surface on the market – FieldTurf Playground.

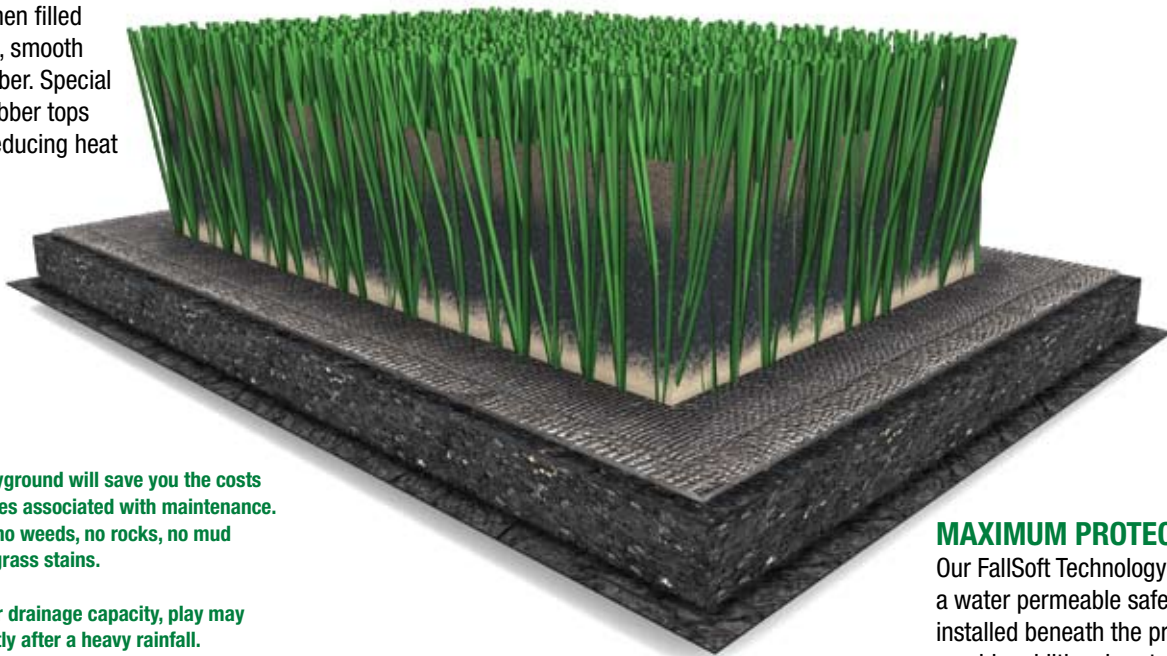

Specially engineered to absorb impact while providing an attractive, grass-like look and feel, FieldTurf Playground is the ideal surfacing solution for your outdoor play area. Scrapes and bruises have always been a part of growing up, but with FieldTurf Playground they don't have to be.

INFILL

The infill consists of a thin layer of clean silica sand, and is then filled with screened, smooth crumb rubber. Special tan colored rubber tops the surface, reducing heat by the sun.

FIBER

FieldTurf's exclusive monofilament fibers offer unparalleled durability while remaining soft and grass-like to the touch.

- **FieldTurf Playground will save you the costs and headaches associated with maintenance. No mowing, no weeds, no rocks, no mud patches, no grass stains.**
- **With superior drainage capacity, play may resume shortly after a heavy rainfall.**
- **Installation is performed by certified personnel that have been carefully selected for this purpose.**
- **Our comprehensive manufacturer's warranty is backed by FieldTurf Tarkett, the most financially secure company in the industry. Contact your local rep for details.**
- **FieldTurf Playground is wheelchair accessible, meaning nobody is excluded from experiencing the comfort and entertainment this surface provides.**

MAXIMUM PROTECTION

Our FallSoft Technology incorporates a water permeable safety pad installed beneath the product to provide additional protection against falls from play equipment. FieldTurf Playground adheres to ASTM and IPEMA standards.

"The first day after we installed the new FieldTurf under the playground equipment, I asked the children to raise their hands if they liked the synthetic turf. All the children raised their hands immediately and one little boy yelled out 'it's cool because the NFL plays on it.' The children love it, but we had some concerns with the rubber pellets possibly being tracked into the school. We sent letters home warning the parents about the rubber granules they might see. It is amazing the rubber has not moved from the playground. It is not in the children's shoes, school, or home. It is a great product that everyone enjoys."
